## SUMMARY

Business Analyst with an M.Sc. in Business Analytics and a computer science foundation (4.0 GPA), experienced across the full data lifecycle: extracting and transforming data from disparate systems, validating data quality, and building SQL-driven analyses and Power BI and Tableau dashboards for operational and executive decisions. Skilled at translating business needs into data requirements and curating clean, well-documented datasets ready for reporting, automation, and ML/AI use. A clear communicator who partners with cross-functional stakeholders and manages multiple concurrent projects.

## CORE SKILLS

**Data & ETL:** SQL (joins, aggregations, filters, validation), Python (pandas) for cleaning, analysis & automation, ETL (extract, transform, validate, document), disparate-source data extraction.

**BI & Reporting:** Power BI, Tableau, SAS Visual Analytics, JMP; KPI dashboards, scorecards, executive reporting; MS Excel (PivotTables, VLOOKUP, VBA).

**Analytics:** Root-cause analysis, forecasting, variance analysis, segmentation; dataset curation for ML/AI model consumption.

**Professional:** Requirements translation, stakeholder & cross-functional communication, time management across concurrent requests, confidentiality (FERPA).

## EXPERIENCE

### Data Science / Analytics Intern | Transvolt Mobility Pvt. Ltd.

Jun 2025 – Aug 2025

- Performed ETL across raw, disparate sensor systems: built SQL and Python (pandas) pipelines that extracted, cleaned, and transformed noisy telemetry into standardized, clearly defined operational and asset-lifecycle metrics.
- Validated data quality across ingestion using reconciliation, freshness, and exception checks, flagging discrepancies and driving fixes so source-to-report metrics stayed reliable.
- Built and maintained a live KPI dashboard on AWS EC2 that leadership used for operational and executive decisions, translating business questions into documented data requirements.

### Project Assistant | Orbit Events & Management · The Gamechangers ME

Jun 2026 – Present

- Structured 800+ unstructured submissions into a consistent, well-defined dataset via a repeatable AI-assisted workflow, curating clean inputs suitable for downstream analysis and automated scoring.
- Delivered a ranked, decision-ready 225-venture shortlist for stakeholders, reducing vetting process redundancy by 25%.

### Graduate Teaching Assistant | VT Pamplin Engage Program

Jan 2026 – May 2026

- Communicated analytics and data concepts to 70+ stakeholders while managing multiple concurrent responsibilities with 100% FERPA compliance, reflecting strong confidentiality and professional ethics.

### Undergraduate Research Assistant | VT Center for Excellence in Learning & Teaching

Mar 2025 – May 2025

- Extracted and structured 1,000+ records, ran analysis, and delivered documented findings and recommendations adopted by stakeholders.

## SELECTED PROJECTS

### Infrastructure Analytics: Power BI & Tableau Dashboards

SQL, Power BI, Tableau

- Reshaped 149 survey responses across 69 fields into a normalized 7-table data model (~4,900 records) feeding 7 interactive dashboards across 35 views, including scorecards and KPI cards for a planning committee's decisions.
- Surfaced the weakest-performing service (rated 2.42/5 and flagged for redesign by 48% of respondents) and quantified a 23% shorter wait for mobile-ordering users, turning raw survey inputs into decision-ready findings.

### Root-Cause & Retention Analysis: HelloFresh / Green Chef

Python, Power BI

- Ran root-cause analysis on 10,000+ records to diagnose churn drivers (a 55% pause and 7% cancellation rate) and quantified a business case worth \$38M+ profit after tax, presenting clear, well-supported recommendations.
- Built the analysis pipeline in Python (NLP) to cluster recurring themes and isolate a 22% recoverable segment, then scoped a product concept projecting 6+ weeks of added retention per customer.

### Healthcare Prediction: Decision Tree Classifier

Python (ML)

- Curated and modeled patient symptom and treatment data for a supervised classifier reaching 99% accuracy, an example of preparing clean, consistent datasets for ML/AI consumption.
- Documented consistent feature definitions and validation checks throughout, guarding against overfitting and keeping the dataset reliable and reproducible for high-stakes predictions.

## EDUCATION

### M.Sc. Business Administration – Global Business Analytics | Virginia Tech

May 2026

CGPA 4.0 / 4.0 · Dean's List | Student Manager – VT Dining Services

### B.Sc. Business Information Technology – Cybersecurity Management & Analytics | Virginia Tech

May 2025

CGPA 4.0 / 4.0 · First Honours Graduate, Pamplin Senior Award (Academic Excellence)

### B.Tech. Computer Science & Engineering – Data Science | NMIMS

May 2024

CGPA 3.6 / 4.0 · Coursework: Statistics, Data Mining & ML, DBMS, Data Structures & Algorithms, Cloud Computing
