SUMMARY

Data scientist with an M.Sc. in Business Administration (Global Business Analytics) from Virginia Tech and a B.Tech. in Computer Science & Engineering (Data Science), writing Python since 2021. Trained and shipped a battery-failure classifier to production on AWS, benchmarked competing classification approaches against AUC on churn data, and ran Python NLP across 10,000+ customer comments to isolate a recoverable segment worth eight figures. Owns problems end to end, from an ambiguous business question through model selection to a deployed service, and explains the result to people who do not write code.

TECHNICAL SKILLS

Machine Learning & Statistics: Supervised classification and regression, ensemble methods (Random Forest, SVM, logistic regression), K-Means and hierarchical clustering, feature engineering, model evaluation (AUC, held-out validation), hypothesis testing, time-series forecasting, segmentation, anomaly detection.

Programming & Data: Python (Pandas, NumPy, scikit-learn, NLP, matplotlib, seaborn), SQL (joins, aggregations, CTEs, window functions), R, Git/GitHub, object-oriented programming, ETL pipelines, data-quality validation.

Production & Cloud: AWS EC2, Docker, Django, Nginx, Gunicorn; model deployment and monitoring, batch automation, source-to-report reconciliation.

Communication: Power BI, Tableau, SAS Visual Analytics, JMP; executive storylines in PowerPoint and Google Slides for non-technical audiences.

RELEVANT EXPERIENCE

Transvolt Mobility Pvt. Ltd.

Jun 2025 – Aug 2025

Data Science & Business Analytics Intern

- Trained a binary classifier in scikit-learn predicting EV battery failure from live CANBUS operating conditions, reaching 94% accuracy on held-out data and moving leadership from reactive maintenance to predictive lifecycle planning.
- Built SQL and Python (Pandas, matplotlib) pipelines transforming noisy, multi-source fleet telemetry into standardized time-series metrics, with reconciliation and exception checks to keep source-to-report data reliable.
- Shipped the model as a Dockerized Django service on AWS EC2 behind Nginx and Gunicorn, powering a live KPI dashboard leadership used for daily operating decisions.

Orbit Events and Promotions (The Gamechangers ME)

Jun 2026 – Present

Project Analytics Assistant

- Structured 800+ unstructured venture entries into a consistent dataset through a repeatable AI-assisted workflow, curating clean inputs for downstream scoring and analysis.
- Built a Power BI dashboard profiling the submission base by geography, industry vertical, funding raised, and startup stage, then screened and ranked a 225-venture shortlist that cut vetting-process redundancy by 25%.

Virginia Tech, Pamplin College of Business

Jan 2026 – May 2026

Graduate Teaching Assistant, Marketing Analytics and Security Simulation

- Taught marketing analytics across two sections and mentored 40 students through security simulations, running office hours and in-class problem solving, and assessed 144 case-study submissions on how students framed open-ended problems and defended recommendations from data.

GRADUATE CONSULTING ENGAGEMENTS *Virginia Tech, Pamplin College of Business*

HelloFresh (Green Chef)

Jan 2026 – May 2026

Analytics Capstone, Product Strategy

- Applied Python NLP to 10,000+ raw customer comments to diagnose a 55% subscription pause rate and 7% cancellation rate, isolating a 22% recoverable segment and reframing the problem from acquisition to retention.
- Sized the business case at roughly \$38M in annual profit impact using a Fermi decomposition of subscriber base, recoverable share, and contribution margin; presented 3 recommendations with implementation sequencing.

Merck & Co.

Sept 2025 – Dec 2025

Consulting Practicum, Business Process Analytics

- Specified a weighted-KPI scoring dashboard backed by a logistic-regression classifier predicting project success and cost-overrun risk, with a cost-benefit case projecting 15% to 25% portfolio ROI improvement.
- Partnered with Merck's Associate Director of Data Science to quantify two organizational bottlenecks, estimating a \$15M to \$40M annual opportunity via Fermi decomposition against industry benchmarks.

DATA SCIENCE PROJECTS

Customer Churn: Model Benchmarking & Segmentation | Python (scikit-learn, Pandas), JMP

- Benchmarked logistic regression, Random Forest and SVM against an ensemble model, scoring each on AUC across a 2,000-record dataset, then applied K-Means and hierarchical clustering to segment users on CTR, engagement and impression rates and isolate a 61-day inactivity threshold.

Infrastructure Capacity Analytics: Data Model to Executive Dashboards | SQL, Power BI, Tableau

- Normalized 149 survey responses across 69 fields into a 7-table relational model (~4,900 records) feeding 7 interactive dashboards across 35 views; surfaced the weakest-performing service at 2.42/5 and quantified a 23% shorter wait for mobile-ordering users.

Strategic Analysis of India's Carbon Footprint | SAS Visual Analytics, Excel

- Ranked 17th globally in the SAS Curiosity Cup as an independent entrant; synthesized large-scale ESG datasets from the BP Statistical Review to identify India's key emission drivers and deliver trend analyses supporting strategic forecasting.

EDUCATION

M.Sc., Business Administration (Global Business Analytics), Virginia Tech (4.0/4.0)

May 2026

Dean's List | Coursework: Business Analytics Capstone, Marketing Policy & Strategy, Principles of Finance

B.Sc., Business Information Technology (Cybersecurity Mgmt. & Analytics), Virginia Tech (4.0/4.0)

May 2025

First Honors Graduate, Pamplin Senior Award (Academic Excellence), Dean's List

B.Tech., Computer Science & Engineering (Data Science), NMIMS Mumbai (3.64/4.0)

May 2025

NMIMS-Virginia Tech 3+1+1 pathway collaboration: final years read at Virginia Tech, both degrees conferred May 2025 | Coursework: Machine Learning, Advanced Modelling for Business Analytics, Data Wrangling, DBMS, AI, DSA | Vice President, Analytika
